

BRIDGE CONSTRUCTION

CALTROP has successfully delivered some of the largest and most complex bridges (over water and live traffic), interchanges and grade separations in multiple jurisdictions. Our trained technical experts possess the specialized skills required for the unique challenges of bridge work, as well as being thoroughly knowledgeable of Caltrans standards, procedures and processes. CALTROP makes sure that the projects we manage stay within their designated time constraints in order to minimize the impacts to surrounding residents, businesses and the traveling public.

Our staff is highly experienced and well-versed in all processes, procedures and applicable standards for bridge-related construction. CALTROP has managed bridge projects in all geographic conditions - from highly urbanized to rural environments. We know how to mobilize personnel to work safely in congested traffic conditions and in remote locations with sensitive environmental concerns.

Project Expertise

- Resident Engineering
- Structure Representative
- Inspection
- Office Engineering
- Federally Funded Project Auditing
- Bridge Widening and Replacement
- Creek Diversions
- Seismic Retrofits
- Waterline and Environmental Endangered Species
- High Risk Utilities
- Caltrans Coordinations
