

TRANSPORTATION CONSTRUCTION MANAGEMENT

CALDROP understands that successful construction management demands diligence and a detail-oriented approach, proactively managed by professionals with the experience, skills and technical support projects demand. Our comprehensive construction management teams include: construction managers, resident engineers, assistant resident engineers, bridge engineers, estimators, schedulers, inspectors, contract administrators, project controls specialists, safety specialists, materials technicians, community outreach specialists and construction claims avoidance experts.

Our qualified staff possesses all the professional certifications and years of experience needed to effectively manage virtually any type of transportation infrastructure project.

Roads / Highways / Freeways

For more than two decades, public agencies, cities and counties have trusted us to safely and efficiently deliver their road, highway and freeway projects. Our staff is highly experienced and well-versed in all processes, procedures and applicable standards for road and highway construction. CALDROP has managed projects in all geographic conditions -- from highly urbanized to rural environments. We know how to mobilize personnel to work safely in congested traffic conditions and in remote locations with sensitive environmental concerns.

Bridges / Interchanges / Grade Separations

CALDROP has successfully delivered some of the largest and most complex bridges (over water and live traffic), interchanges and grade separations in multiple jurisdictions. Our trained technical experts possess the specialized skills required for the unique challenges of bridge work, as well as being thoroughly knowledgeable of Caltrans standards, procedures and processes. CALDROP makes sure that the projects we manage stay within their designated time constraints in order to minimize the impacts to surrounding residents, businesses and the traveling public.
