

CALTROP offers professional rail services capabilities in program, project, construction and risk management ranging from new rail starts, extensions and facilities. Our team of expert construction managers, resident engineers and inspectors are knowledgeable of rail and transit maintenance facilities, track construction, systems, stations, inspection, testing, as well as start-up requirements of rail construction management. Their experience extends to freight rail, HSR, commuter rail and light rail applications.

Our rail services staff also has experience working for agencies and on projects throughout the United States and internationally, such as the Marmaray Tunnel Project in Istanbul, Turkey, the deepest undersea rail tube tunnel in the world. As a supplement to our domestic rail resources, CALTROP maintains a strategic alliance with ARTELIA Group in France, an international firm experienced in the planning, design and construction supervision of high-speed rail and facilities in Europe and Asia. ARTELIA's experts offer our clients a unique global outlook on the delivery of successful rail projects.

CALTROP understands the need to develop a comprehensive local, regional and national rail infrastructure to accommodate the needs of the traveling public in the years to come. We possess a keen understanding of multimodal connectivity needed to propel public transportation and rail transit into the new age of rail. We offer those services to you with the best and brightest minds working in the transportation industry today.
