# AVIATION SERVICES

CALTROP®

CALTROP's team of industry professionals has a solid reputation for managing and completing major airport projects. Our flexible management approach provides clients with experienced experts who have a keen understanding of airport operations - ensuring a well-coordinated team effort in which documentation support is always in step with scheduled construction activities.

Our experience in this sector spans over a decade. From major metropolitan and regional airports to military air bases, CALTROP's team of certified and licensed professionals understands the unique needs of airport safety and security, and has a proven track record of delivering quality engineering services to our clients. Our qualified staff includes project managers, construction inspectors, utility coordinators, materials testers and schedulers who are knowledgeable of FAA standards, processes and procedures.

As a leading provider of technical construction support services to airport and aviation clients, our team will provide the broadest array of services – including construction inspection; coordination with airport authorities; FAA and regulatory compliance; and relocation, upgrades and reconstruction of airport infrastructure and facilities.

Our full range of aviation industry services include:

- Program Management
- Construction Management
- Construction Inspection
- Expert Document Control
- Material Source Inspection
- Utility Coordination / Relocation Oversight
- Electrical Systems Upgrades
- Quality Assurance
- FAA Compliance
- Materials Testing
- Storm Water Management
